

The Original GazCal

from Spantech Group

On demand ppm chlorine gas generator

UK made, UK serviced, manufacturing quality at the right price

The GazCal generates low concentration chlorine (Cl₂) gas for testing and calibrating gas detectors, particularly in safety systems, without the need for bottled gas.

Its robust construction is suitable for demanding industrial environments, while its portable design makes it easy to carry and transport.

Video technical support is available via Zoom, FaceTime or Skype.

Key benefits

Easy to use	Mains or battery powered	Tough and rugged
Easy to carry and transport	No bottled chlorine gas required	UK made and serviced

Main characteristics

Specification	Details
ppm range	0.1 to 20 ppm. High ppm and low ppm versions are available at the same cost.
Flow rate	0.5 or 1.0 Lpm
Gas production technique	Electrochemical
Cell life	Typically 1 to 2 years, depending on use
Power	Internal rechargeable 12 V battery
Recommended service interval	12 to 24 months

GazCal servicing: how it works

If your GazCal requires servicing or recalibration, contact Spantech Group before sending your unit to us. We will confirm when it arrives, inspect the unit, and provide a quotation for recalibration and any corrective work required. Once the quotation has been approved, our engineers will carry out the work and aim to dispatch the unit within 48 hours of approval, helping to keep downtime to a minimum.
